

# European Journal of Applied Mathematics

## Editorial policy

The journal publishes *research papers* and *survey papers*.

**Research papers** may be in any area of applied mathematics, with especial emphasis on *new mathematical ideas relevant to modelling and analysis in modern science and technology and the development of interesting mathematical methods of wide applicability*. There is no restriction in the scope or style of mathematics as long as the content is presented to be as accessible as possible to the entire community of mathematicians and mathematical scientists. This applies in particular to the Introduction and conclusion. Standard mathematical techniques will only be published if they are associated with novel applications or lead to substantial advances in established problem areas.

**Survey papers** aim to bridge the gap between academia and industry by presenting mathematical methods relevant to industry in its broadest sense, ranging from manufacturing to finance, telecommunications to biotechnology, and describing industrial problems of interest to mathematicians. Coverage includes reviews of techniques in relation to industrial application, new problem areas for which mathematical models and techniques are not yet available, comparison of solution methods, and descriptions of modelling approaches.

## Submission of manuscripts

Submission of a paper is taken to imply that it has not been previously published and that it is not being considered for publication elsewhere. Authors of articles published in the journal assign copyright to Cambridge University Press (with certain rights reserved) and you will receive a copyright assignment form for signature on acceptance of your paper.

Manuscripts for consideration for the European Journal of Applied Mathematics should be submitted electronically, using the [Editorial Manager](#) system. The system will allow authors to benefit from faster review and earlier online publication. The system will accept PDF files; most other file types will be automatically converted into PDF. Source files will be required for any paper accepted for publication. Authors who are unable to submit online should contact the [editorial office](#).

*Details of Style files* The LaTeX 2e file `ejm.cls` and the guide `ejmguide.tex` are available via anonymous ftp from the Cambridge University Press site at <ftp://ftp.cambridge.org/pub/texarchive/journals/latex/ejm-cls>. In case of difficulties obtaining these files, there is a help-line available via e-mail; please contact [texline@cup.cam.ac.uk](mailto:texline@cup.cam.ac.uk). The file `readme.txt` contains instructions; alternatively, authors may use plain 'article' style.

## Layout of manuscripts

Papers should be typewritten **in double spacing throughout**, on one side of the paper. Please avoid footnotes if possible. Papers must begin with an abstract of not more than 300 words, and they should end with a brief concluding section. The SI system of units must be used throughout. There is no formal

restriction on length, but short papers are likely to appear sooner than long ones (over 20 typeset pages) which are likely to be subject to delay.

## Illustrations

Wherever possible figures should be produced and incorporated into the text using a standard  $\LaTeX$  compatible package; they will be reproduced *with* the author's lettering. EJAM welcomes the submission of papers containing colour illustrations. However, owing to the high cost of colour reproduction, authors are asked to contribute approximately £500 for each full page in colour. Exemption from charges for colour reproduction will only be made if referees decide that colour is essential, and if authors make an explicit case to the Editor explaining why they are unable to meet the extra cost.

## References

The Harvard system of references is preferred. References should be listed in alphabetical order at the end of the main text. Please include the article title in the reference, which should be in the order: author's surname, initials; year in parentheses; article title; journal name, abbreviated in accordance with the *World List of Scientific Periodicals* (4th Edn); volume number (underlined); inclusive page numbers.

## Citations in the text

Any of the following three ways of citing a 1992 paper by A. European may be used: European (1992); European [Eu]; or European [7]. In the second case, the reference at the end of the text should be preceded by [Eu], and in the third by [7].

## Proof Reading

Typographical or factual errors only may be changed at proof stage. The publisher reserves the right to charge authors for correction of non-typographical errors. No page charge is made.

## Incremental Publishing and DOIs

The European Journal of Applied Mathematics now publishes articles incrementally online (at Cambridge Journals Online: [journals.cambridge.org](http://journals.cambridge.org)) as soon as author corrections have been completed and before they join a printed issue. A new reference has now been added to the first page of the article in the journal catchline. This is the DOI—The Digital Object Identifier. This is a global publishers' standard. A unique DOI number is created for each published item. It can be used for citation purposes instead of volume, issue and page numbers. It therefore suits the early citation of articles which are published on the web before they have appeared in a printed issue. <http://www.journals.cambridge.org/EJM>

## Offprints

No paper offprints will be supplied. Each author will have access to electronic offprints in pdf form.

## **Editorial note**

Following recent developments in electronic publishing at Cambridge University Press, we are pleased to announce that starting with the Volume 12, Part 5 issue of European Journal of Applied Mathematics, each article and book review will be annotated with a digital object identifier (DOI). A DOI gives each article and book review a code made up of a Cambridge University Press Prefix and a unique numerical identifier number, which is a code increasingly in use for items published on the web. Such articles and book reviews can then be referenced and retrieved as separate items. DOIs will also be useful for citing and identifying individual articles as separate entities, without the need to list specific journal, volume or issue details.

*(Revised 17/6/2009)*
