

The submission stage

Authors are encouraged to submit their manuscripts electronically through the web at the following address: <https://articlestatus.edpsciences.org/is/mi> or by connecting to the website of the journal at:

<http://www.mecanique-industries.org/>

For the peer review process

Manuscripts should be preferably in one single PDF with text, figures and tables. Word, PS or RTF files are also accepted.

In exceptional cases, a paper version of the manuscript can be addressed to the Editorial Office:

Virginia Carra
AFM, Maison de la Mécanique
39/41 rue Louis Blanc
92038 Paris la Défense Cedex, France
Tel.: +33 1 47 17 60 74
Fax: +33 1 47 17 62 51
secretariat@afm.asso.fr

The language of the journal is English. *Mechanics & Industry* can only consider articles that have been approved by all co-authors, and that have not been published and are not currently submitted for publication in any other journals. When an author has used a figure or a table from another publication, he should indicate clearly the origin of the manuscript and should also obtain the permission for reproduction from the publisher concerned. All papers are reviewed and only the articles with a positive report will be accepted for publication. *Mechanics & Industry* publishes original articles or reviews on applied mechanics with, if possible, industrial applications.

The acceptance stage

At this stage, an electronic version of the manuscript in one of the following formats is required: Word, RTF, TeX or LaTeX for the text; EPS, TIF or JPG formats for the Figures (in high resolution, > 300 dpi).

Authors are informed that any missing element in an accepted article (electronic file of the text and figures and/or good quality laser-printed figures) will delay the publication date. The editorial board will keep the paper on a waiting list until all missing material is received.

Style Guide

The manuscript should be typed double-spaced (Times New Roman, 12 pts) with margins of at least 3.5 cm at the top, bottom and sides, and print only on one side of the sheet. All pages should be numbered. The manuscript should be presented as follows: title page, abstract and keywords, nomenclature, introduction, materials and methods, results, discussion, acknowledgments, references, figure legends, tables, figures and finally, annexes. Section headings should be numbered following the international numbering system (1., 1.1., 1.1.1., etc.). Punctuation characteristics of the English language should be used (semi-colons, colons, question marks and exclamation marks are never preceded by a space in English). Abbreviations should be punctuated. There is no space between opening and closing brackets and the following and preceding words. Uppercase letters should be accented; small capitals should not be used. The publication of the text and black and white figures is free of charge.

Title page

The title page should include the following: the title of the article, which should be concise but explicit, the surname and forenames (in full) of each author, the department and institution where the study was carried out, the e-mail address of the corresponding author (this author being identified by an asterisk), and a short title (running head) of no more than 45 characters, including spaces.

Abstract and keywords

The abstract (between 150 and 200 words) should be in a form suitable for abstracting services. It should contain no paragraphs, footnotes, references, cross-references to figures and tables or undefined abbreviations.

Up to five keywords should be supplied, to assist the reader and facilitate information retrieval. Keywords may be taken from the title, abstract or text. The plural form and uppercase letters should be avoided. Keywords should be written in bold lowercase letters, separated by slashes.

Nomenclature

All parameters quoted in the text should be presented, in alphabetical order, in the "Nomenclature" section at the beginning of the paper, with their definition and units. All measurements, data and symbols should be given using international norms (ISO) and should always be written in italic.

SI units should be used: the unit "litre" should be abbreviated as "L" (also mL, μ L, etc.), minutes as min, degrees as °C or K. All units should be typeset in roman. Note that Angstrom is not accepted anymore and should be replaced by nanometer ($1 \text{ nm} = 10^{-9} \text{ m}$) or picometer ($1 \text{ pm} = 10^{-12} \text{ m}$). Multiple units should be written with negative exponents (example: $\text{W.m}^{-1}.\text{K}^{-1}$).

Equations and Numbers

Equations that are referred to in the text should be numbered with the number on the right-hand side and should be numbered sequentially throughout the text (i.e., (1), (2), (3)). Do not add punctuation at the end.

Be careful to make a clear distinction between the figure zero (0) and the letter O, the figure one (1) and the letter I, the Roman letter v and the Greek letter nu (ν). Vectors and matrices should be in bold. It is important to distinguish between $\ln (= \log_e)$ and $\lg (= \log_{10})$. Use a Roman e for an exponential e. But except for simple examples, exponential expressions, especially those containing subscripts or superscripts, are clearer if the notation $\exp(\dots)$ is used. Use a Roman d for a differential d (for example: $\tan r = dj/dx$).

Figures and Tables

Each figure and table should be cited in the text. Figures should be numbered sequentially – "Figure 1", "Figure 2", and should be cited in the text as "Figure 1", "Figure 2" and (Fig. 1), (Fig. 2) in brackets. Each figure and table should have a brief caption describing it. Captions should be placed below the figure and at the top of the table.

Authors should remember that the final printed quality of illustrations can never be better than the quality of the original artwork. Lettering (symbols, numbers, etc.) should not differ from figure to figure and should be of sufficient size to remain legible after reduction (letters 1–2 mm high after reduction to either one- or two-column format). You should note that as part of the production and typesetting processes, figures may be resized to fit the design of the journal. Scaling of graphics will, of course, affect line thickness and text size in the figures. Figures should be planned for the column width (8.8 cm) of the journal. If the detail shown requires it, 1.5 or 2 columns may be used. The final size of capital letters or numerals in a figure usually lies within the range 1.6–2.3 mm to avoid any disproportion between figure/text character sizes.

By default, figures appear in colour in the electronic version but they are published in black and white in the paper version of the journal. If an author wishes to publish colour figures in the paper version, this will be at his expense. Authors having submitted colour figures and accepting a b/w version in print should satisfy themselves at the proof-reading stage that the b/w version is of satisfactory quality and no (ambiguous) reference is made to colour coding in the figure captions or in the main text.

References

It is important to confirm the accuracy of bibliographic information in references. This has become more important with the online version. Hyperlinks will be programmed to enable readers to jump directly to the material cited. If your reference citations are incorrect or incomplete (e.g., missing author name, or an incorrect volume number or page), the associated hyperlinks may fail, and the usefulness of your paper in the online environment may be diminished.

References should be cited in the text by placing sequential numbers in brackets (for example, [1], [2,5,7], [8–10]). They should be numbered in the order in which they are cited.

The reference list comes at the end of an article and consists of an *unnumbered* "References" section containing references sorted according to the following referencing style:

Journals (all authors should be cited)

[1] C. Smith, J.C. Green, Modeled behavior of hydrodynamic bearings in thermal engine, *Mechanics & Industry* 10 (2009) 55-72

Books or Theses

[2] M.N. Ozisik, Radiative transfer and interactions with conduction and convection, John Wiley and Sons, New York, 1973

[3] P. Sebastian, Analyse de réseaux de transferts : application à l'expertise de séchoirs, Thèse, Université Bordeaux I, 1992.

Proceedings

[4] D. Bougeard, J.-P. Vermeulen, B. Baudoin, Spatial resolution enhancement of an IR system by image restoration techniques, in: D. Balageas, G. Busse, G.M. Carlomagno (éd.), Proceedings of Quantitative Infrared Thermography QIRT 94 (Eurotherm Seminar 42), EDP Sciences, Paris, France, 1995, pp. 3–6

Annexes and Electronic-only material

Use appendices if vital to the understanding of complex formulae and in this case, treat them as normal sections. If there are equations, they should be numbered separately from those in the main text as (A.1), (A.2), etc.

We encourage authors to submit multimedia attachments to enhance the online versions of published articles. Multimedia enhancements typically consist of video clips, animations or supplementary data such as data files, tables of extra information or extra figures, programs, etc. They can add to the reader's understanding and present results in attractive ways that go beyond what can be presented in the print version of the journal. For more information on the submission of this material (file requirements, etc.), please contact the Production Office.

Proofs and Offprint orders

Proofs will be sent by electronic mail to the corresponding author indicated on the title page. Authors should keep in mind that reading proofs is their responsibility. Corrections should therefore be clear and the use of standard proof correction marks is recommended. Files typeset using Word, WordPerfect, RTF etc., need heavy retyping (equations and special characters are lost during the conversion process). The main aim of proofreading is to correct errors which may have occurred during the production process, and *not to modify the content of the paper*. The reproduction of artwork, the layout of the pages and equation spacing introduced by the production staff should be carefully checked. The proofs, once corrected, should be signed and returned to the publisher within 48 hours of reception with the copyright form.

The PDF file of the article will be provided free of charge to the corresponding author. An order form for reprints – and, if required, for the publication of colour figures – will accompany the proofs.
